

Student presentations as video assignment

You can have your students record their presentations at home using *Kaltura Capture*. Students can hand in the video assignment via Pitch2Peer on Brightspace.

Recording presentations with *Kaltura Capture*

Students can also use *Kaltura Capture* to record their presentation. One option is to use screen capture and combine it with a voice-over. Various presentation tools like PowerPoint, Prezi or other software can be shown on the screen. If the presentation is short, like a pitch, just a webcam recording could also suffice.

Please note the following! Although it is possible for students to simultaneously use the Kaltura Capture screen recording along with a webcam image, it is not possible to hand it in as such via Pitch2Peer. After submitting the video in Pitch2Peer the webcam image completely disappears and all that remains is the screen recording with voice-over. Should the assignment call for a screen recording that does include a webcam image then please contact the SOLO team: solo@fsw.leidenuniv.nl

Submitting presentations in Pitch2Peer

Pitch2Peer is a peer feedback tool that is available within Blackboard and Brightspace. Students can hand in their video presentations in Pitch2Peer and watch and provide feedback on other students' presentations. If no peer review is necessary then click on the 'Submission only' option in your Pitch2Peer assignment settings. The presentation will now only be visible for the teacher and he is the only one who can provide feedback.
